## **Develop The Web Application Using Node-RED**

1. To Develop the web application using Node-RED

### Steps:

1. Open a Node-RED project

2. Add code to get child location in python

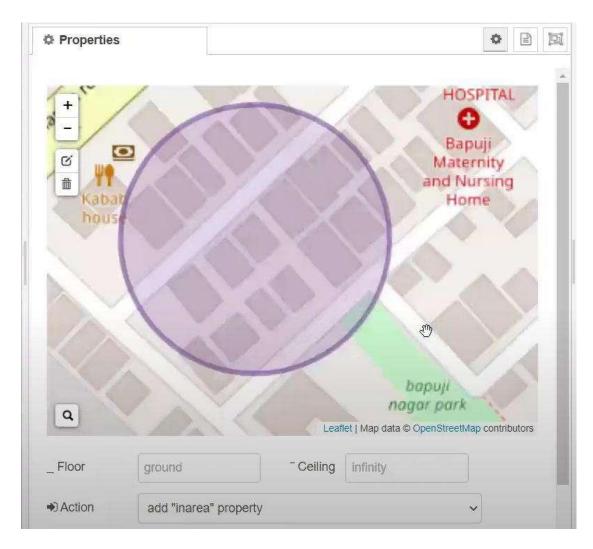

```
import json
import wiotp.sdk.device
import time

myConfig = {
    ""identity": {
        "cogId": "hjbfmy",
        "typeId": "NodeMcU",
        "deviceId": "12345"
},
    "auth": {
        "token": "12345678"
}
}
client = wiotp.sdk.device.DeviceClient(config=myConfig, logHandlers=None)
client.connect()

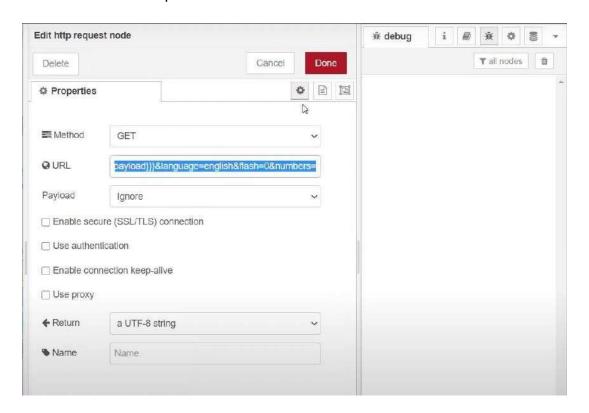

Thile True:
    name= "Smartbridge"
    #in area location
    latitude= 17.4225176
    longitude= 78.5458842
    #out area location

#latitude= 17.4219272
#longitude= 78.5458883
    myData=('name': name, 'lat':latitude,'lon':longitude)
    client.publishBvent(eventId="status", msgFormat="json", data=myData, qos=0, onPublish=None)
    print("Data published to IBM IoT platfrom: ",myData)
    time.sleep(5)
client.disconnect()
```

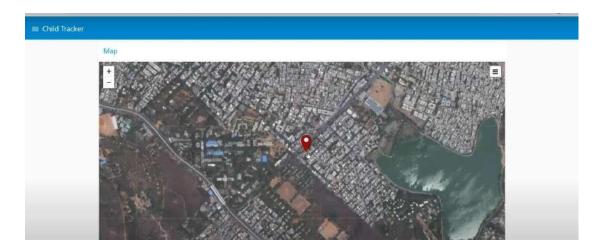

### 3. Create the GeoFence

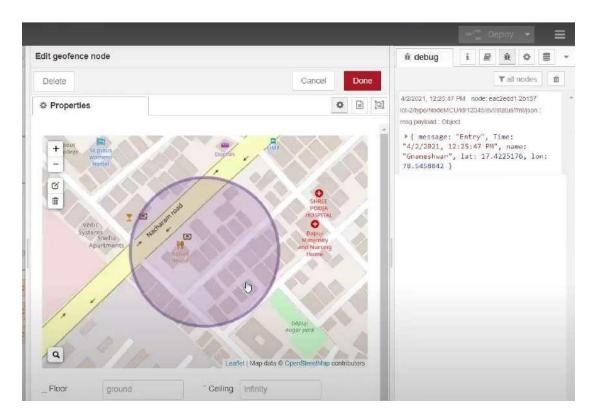

## 4. Edit the HTTP Request URL

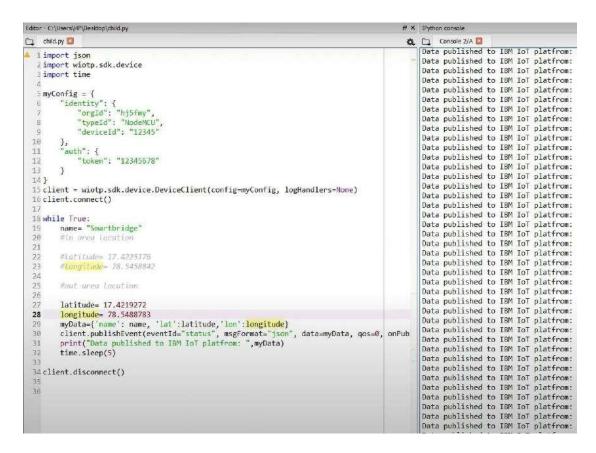

## 5. Locate the child

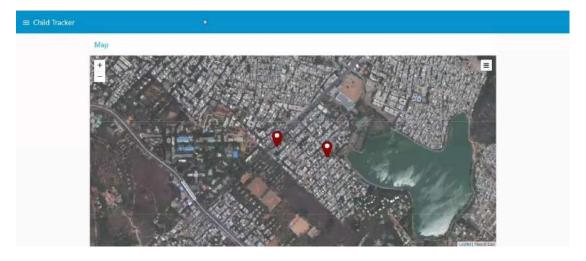

# 6. Create the geofence node

7. Python script send requests to IBM Cloud

8. After running the script, the web UI shows "Person is not in the particular area"

#### **Conclusion:**

Developed the web application using Node-RED Successfully
